

Professional Profile

Final-year (5th year) Industrial Computing and Automation student at INSAT, comfortable moving between the OT floor (PLCs, sensors, factory layout) and the IT tools used to run it (SAP, custom web apps, simulation software).

At Autoliv, I turned a fully manual, 4-day cross-department planning process into a web application that runs the same logic in under 20 minutes – my clearest example of bridging OT knowledge into an IT tool.

Looking for a final-year internship in industrial digitalization, digital transformation, or IT/OT engineering, starting February 2027.

Education

Engineering Diploma, Industrial Computing and Automation – Intelligent Systems track2022 – 2027

INSAT – National Institute of Applied Sciences and Technology, Tunis (Machine Learning, Big Data, Deep Learning, Data Science, Operations Research, UML)

Professional Experience

Intern, APS Department (Autoliv Production System – Continuous Improvement & Digitalization)Jun – Aug 2025

Autoliv, El Fahs, Tunisia – supervised by Slim Hsan, APS Manager

- From spreadsheet to software:** mapped the VS Matrix method (grouping products into flows/value streams, sizing equipment, flagging CAPEX needs) manually in Excel first, then built a **Python/Streamlit** app (AG Grid, session state, AI-assisted compatibility matrix) plus a separate **HTML/JS drag-and-drop** layout simulator – cutting a **4+ working-day, multi-department task down to under 20 minutes for one person**.
- Digital layout work:** studied and updated the factory layout in **AutoCAD** to support the equipment-allocation logic of the tool.
- New systems, fast:** picked up **L2L** and **PLM** on the job, and rebuilt the plant’s Lean dashboard in **Python (openpyxl)** with automated KPI cards and charts.
- Visual documentation:** used draw.io to consolidate and present VSM/VSD/VSD² results from a cross-functional workshop on a high-runner product.

Intern, Industrial Engineering2024

Lacroix Electronics, Tunisia

- Worked with Siemens PLCs (TIA Portal), Ladder logic, and Profinet/Modbus – direct exposure to the OT-network side of industrial digitalization.

Technical Projects

SAP Production Management Project – modeled and ran a full production cycle in SAP (master data, multi-level BOMs, work centers, routings, MRP, order confirmation and technical closure) via Wynsys Academy, INSAT’s SAP training partner; visited the Gruner factory to see SAP running on a real production line.

Factory IO & TIA Portal Project – simulated a factory floor controlled by a Siemens PLC, with KPI tracking and visualization linked back to Excel to read the production plan.

AnyLogic Manufacturing Supply Chain Simulation – custom simulation logic for a manufacturing supply chain, with KPI analysis and bottleneck detection.

Additional projects: embedded vision quality control, industrial digital twin, autonomous inspection robot, VoltMind AI assistant, operations research logistics study, project management project, Spark (educational STEM app).

Technical Skills

Digitalization & IT Systems:	SAP/MRP, L2L, PLM, UML modeling, Python, SQL
OT & Automation:	PLC/TIA Portal, Factory IO, Profinet/Modbus, Ladder logic
Simulation & Design:	AnyLogic, AutoCAD, draw.io
Reporting:	Power BI, Excel (VBA, pivot tables)
Languages:	Arabic (native), French (C1), English (C1)

Leadership & Distinctions

Chairwoman, IEEE Women in Engineering – INSAT SAG (2024–2025) – led a **100+ member** organization: budget, volunteer team, and end-to-end technical events.

Team Lead, VIP & Protocol Department – National Robotics Week 8.0 (2026) – ran the VIP & Protocol team and developed panel content (automotive/SDV, cyber-physical security) for a national robotics event.

Robotics Instructor, Play Mind Club (2025 – Jun 2026) – ran STEM workshops (Scratch, Arduino, robotics) for children aged 8–12.
